SCAN COIN 8200
Two-pocket Currency Sorter

Two versions available:
SC 8200 V (Value Sorter) and SC 8200 F (Fitness Sorter)

External display for SC 8200

www.scancoin.com
The SC 8200 currency counter and sorter is the first SCAN COIN heavy-duty 2-pocket machine for demanding cash processing environments, ensuring outstanding results when reliable high-performance is essential day after day.

Cash handlers such as banks, cash centres, exchange offices and supermarkets want to improve banknote counting and sorting efficiency and minimise stoppages caused when counterfeiters are identified or machines jam due to bad quality notes.

Ready for a heavy-duty role
The SC 8200 is designed to offer top performance in heavy-duty cash processing operations. This highly efficient 2-pocket machine makes non-stop processing possible. Unfit notes and counterfeiters are off-sorted to a reject pocket without interrupting the processing flow.

Fitness sorting
Quality sorting is becoming increasingly important for professional cash handlers, as more and more customers demand a supply of good quality notes with bad quality notes off-sorted. The fitness sorting version of the SC 8200 accurately sorts fit and unfit notes according to the customer’s exact requirements.

Windows of opportunity
The SC 8200 is one of the first banknote counters and sorters to use Windows CE as an operating system. This creates a well-defined, user-friendly interface, which provides excellent flexibility and connectivity, making it easy to upgrade and connect to cash management systems at banks or cash centres.

Record serial numbers
With the serial number detection option, the machine can read banknote serial numbers and send the information to a remote data storage system. This special option suits operations such as exchange offices where a serial number database can assist in tracing counterfeit or stolen banknotes.

Password protection
All user levels – from factory settings to administrator, service technician and various pre-set user settings – have password protection, which ensures that only qualified personnel have access to the menus and options they have been trained for.

Modular design and software updates
With a service-friendly modular design it is easy to replace parts and carry out daily maintenance, which means low servicing costs and short service-related downtimes.

Updates are made quick and easy through the USB port.
This includes all updates and upgrades concerning new notes and software as well as all available options.

Technically
The SC 8200 is equipped with a well-defined and user-friendly interface.

Easy maintenance.

Dust pocket and USB ports at the rear.

TECHNICAL SPECIFICATIONS
